## GENERAL FAN FACTS .....18-19

# THE STRAIGHT WAY

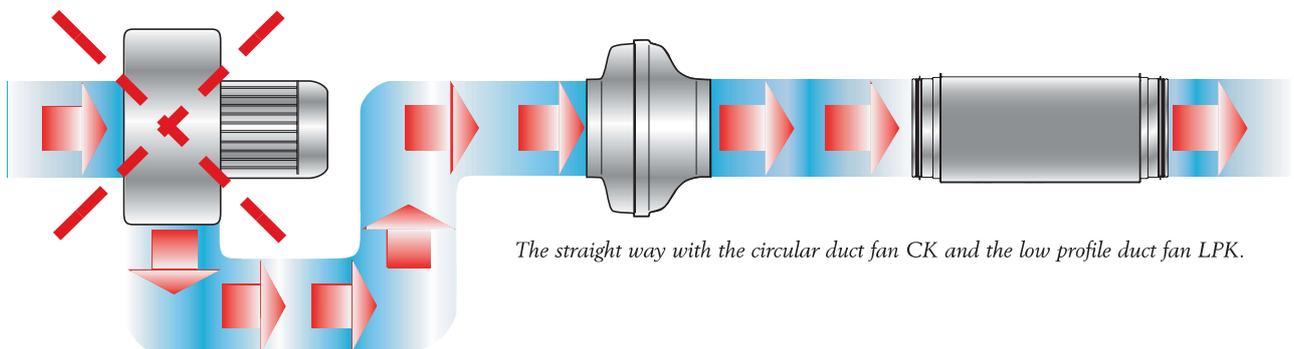

## One of the best inventions since the light bulb

The original idea for the in-line duct fans was to combine the benefits of the radial fan, high pressure and low sound level, with the straight-through airflow of the axial fan.

In 1973 the result was the in-line circular duct fan. This was the first in-line radial duct fan with an external rotor motor and straight-through airflow. Apart from high pressure and low sound level, the main benefit was the ease installation. Unlike the conventional radial fans the in-line circular duct fan is compact and does not require complicated duct arrangements to install it.

A further development of the in-line circular duct fan occurred when Hans Östberg invented, in the middle of the 70's, the rectangular in-line duct fan, which has a low installed height.

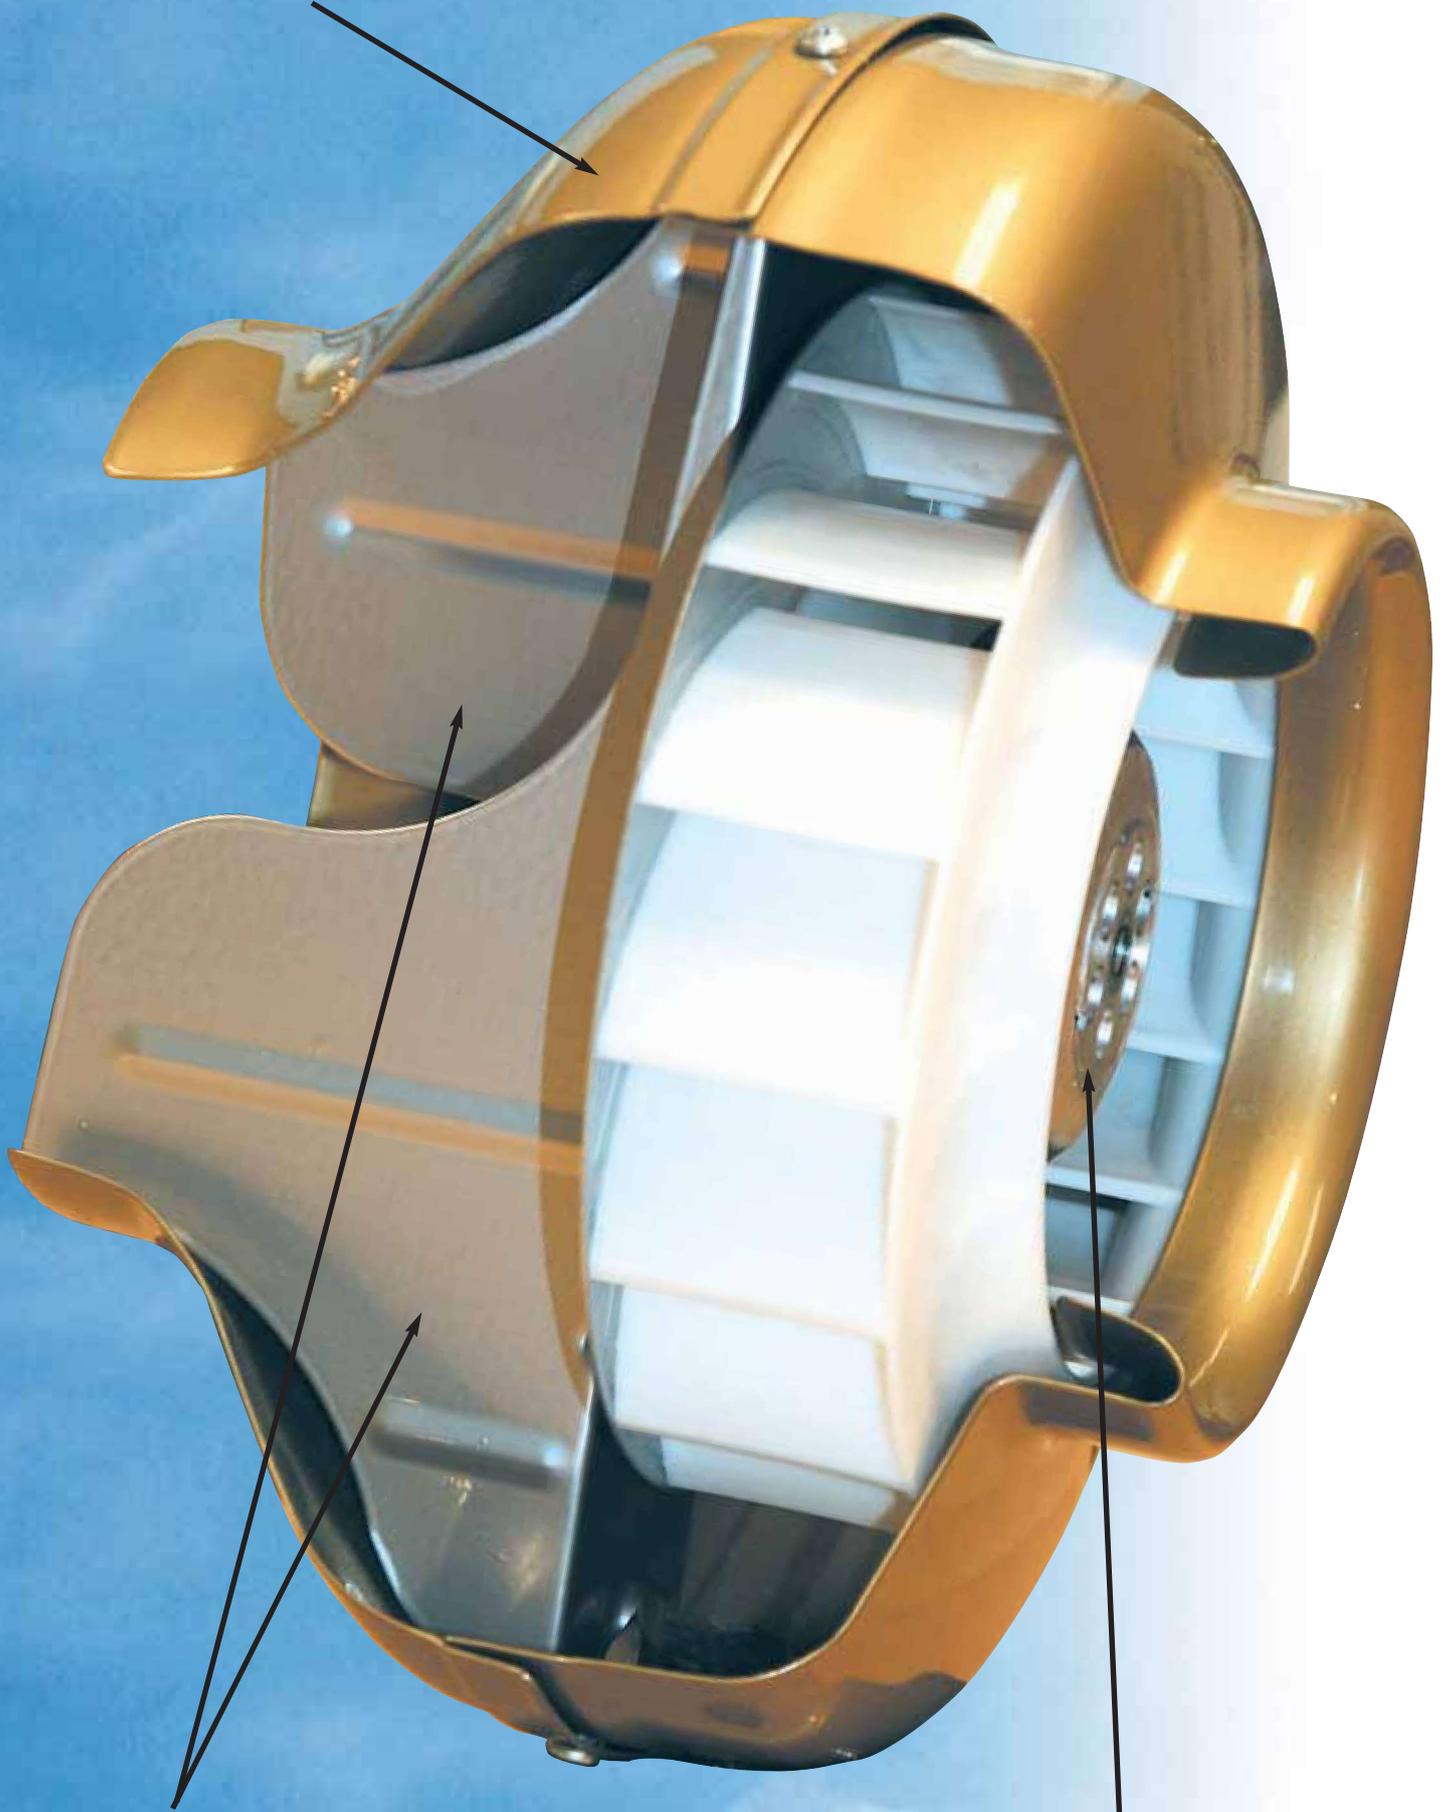

Following on from the rectangular in-line duct fan was the lower profile in-line duct fan LPK. Its installed height is only two centimetres more than the duct dimension. Another advantage is the swing-out design making the impeller very easy to clean.

*The straight way with the circular duct fan CK and the low profile duct fan LPK.*

*The design of housing results in higher flow and with that an even higher efficiency.*

*European Patent 0625642.*

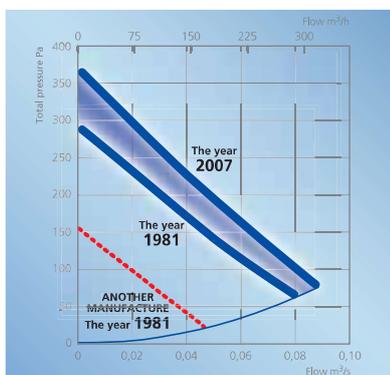

*The revolutionary motor bracket with integrated guide plates that improves the capacity.*

*The external rotor motor with backward curved impeller blades is provided with approved motor protection.*

## CK, circular duct fan

At the start of the 1980's another revolutionary development of the in-line circular duct fan occurred. AB C.A. Östberg launched a new generation fan which had a new casing design, an innovative motor support with integral guide vanes as well as an improved impeller design. After these changes the result was superior

The development of the in-line circular duct fan CK with duct dimension 100 mm. Until the year 1981 the most common model on the market had both low pressure and airflow. In 1981 a superior model was introduced by AB C.A. Östberg which had a much higher pressure and airflow.

technical data compared to their competitors (see diagram).

In 1993 Hans Östberg was granted the patent on further improvements (European Patent 0625642), which resulted in higher quality at the same time as reducing the manufacturing costs.

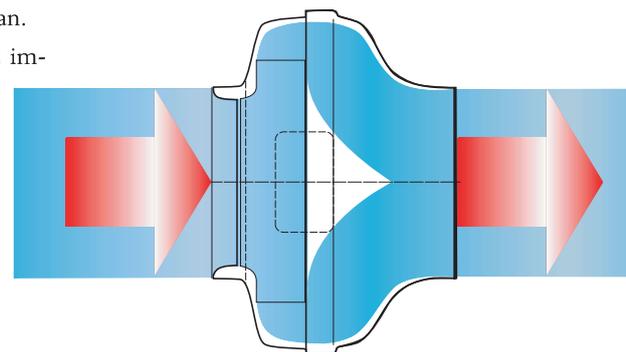

### HIGH CAPACITY AND OPERATIONAL SAFETY

High quality, low sound levels, easy installation and well designed useful accessories are some of the hallmarks of the CK in-line circular duct fan.

CK has a backward curved impeller, an external rotor motor and straight-through airflow. It's compact, requires little space for installation and has a high capacity.

The CK fan can cope with high pressure and long duct runs, whilst still operating with a low sound level. The fan speed can easily be controlled by voltage or variable frequency regulators.

The CK is moisture resistant and is approved for installation in humid or damp environments. The fan casing is manufactured from pre-galvanised steel and the motor has in-built protection. The CK can be installed in any position and is rate IP 44 when installed in a duct system.
